

**World Leaders in the design and manufacture
of centrifugal casting machines & associated equipment**

Turning Our Experience to your advantage

Gibson Centri Tech Limited is recognised as one of the world's leading exponents of centrifugal casting technology. With more than 30 years experience, the company has remained at the forefront of developments in the design and manufacture of centrifugal casting systems.

Gibson's services can include process application selection, preparation of new plant and workshop layouts, project management, equipment installation, technical training and "know how" transfer.

The size of castings which Gibson's machine manufacture range from 2cm up to several metres in diameter. The weight of the castings produced can be from a few grams to many tons. Products can range from miniature rings to 30 tonne rolls or sleeves for the steel industry. Most alloys can be cast using the centrifugal casting process, for instance Gibson Centri Tech provides equipment to cast bi metal double alloy steel rolls also a wide range of ferrous and non ferrous alloys. Centrifugal casting process is usually ideal for producing cylindrical castings but can also be utilised to cast other shapes.

Beginning with the careful evaluation of customers requirements, Gibson Centri Tech Limited will select the most efficient centrifugal casting equipment and process. Every stage of manufacture is under the company's complete control and precise dimensional accuracy is assured. Prior to delivery, each machine is assembled and workshop tested to the most rigorous standards. Gibson Centri Tech's extensive experience in project management and commissioning ensures that every aspect of the scheme is coordinated to meet production deadlines and all the necessary performance criteria.

Some of the Applications of Centrifugal Castings that can be produced on Gibson Centri Tech Machines.

INDUSTRY	ITEM
Aeronautical	Jet and Turbine Engine Components
Automotive	Cylinder Liners, Piston Rings, Valve Seats
Building & Construction	Rainwater/Sewerage Pipe, Flanges
Foundry	Continuous Casting Rollers, Dies for Centrifugal Castings
Generating	Bearings, Stators, Slip-Rings
Marine	Bearings, Drive Hubs, Propellers, Engine Cylinder and Pump Liners
Petro Chemical	Tubes for Reformer Furnaces
Paper	Rolls, Suction cylinders
Jewellery	Ornamental Castings
Steel	Rolls and Sleeves

ALPHA GYRA RANGE

Will produce castings from 100Kgs to over 5000Kgs

VERTICAL AXIS MACHINES

From bushes to rolling mills. Floor or pit mounted depending on size

GML MACHINE RANGE

For white metal lining/Babbitt Dual clamping system

SHPP

From manual machines to fully automated Gibson's produce machines that can make castings every 33 seconds

Gibson Centri Tech Limited

Hilltop Works, Trent Valley Industrial Estate,
Eastern Avenue, Lichfield,
Staffordshire. WS13 6UY. England
